# Increasing children's capacity to learn and communicate effectively

FREE INTRODUCTORY SEMINAR – TERM 3

For teachers and parents who support growing minds

## Is this yet another change?

Teachers are very often overburdened trying to meet both the demands of the curriculum and in dealing with individual learning needs of children. Both are required to nurture productive, responsible and caring citizens for our future. Yet, despite the best efforts of teachers and parents some children still struggle at school. Meanwhile, others who do well want to do even better.

Teachers and parents may hesitate to take on yet another change. They have enough on their plate already! Unless of course the change helps them accomplish more and get better outcomes for themselves and their children in less time with less effort. *Is there a solution? Maybe.....!!!*

## What if children became more responsible and effective for their own learning and behaviours?

What if we could provide critical thinking tools to help children improve their own cognitive skills, personal and academic achievement and behaviours?

If children had these capabilities, would this not also help teachers and parents?

## Why attend this seminar?

- Hear about three simple, practical and logical thinking tools enabling people of all ages to:
  - Deal with day to day conflicts
  - Predict and prevent undesirable consequences of actions and behaviours
  - Set their own goals and develop a logical plan for achieving them
  - Identify the key ideas or issues within a lesson or text
  - Sequence what they have learned into a logical order for improved understanding
  - Expose and check the validity of assumptions
  - Identify inconsistencies in logic
  - Clarify problems and create their own thoughtful arguments and solutions
  - Communicate clearly

- Discover the reasoning behind introducing these simple to learn and highly effective tools to children, parents and educators
- Learn about TOC for Education (TOCfE) and the origin of these thinking tools
- Understand why these tools are being rapidly adopted in classrooms and community organisations worldwide
- Hear case studies and examples

To find out more and to arrange a seminar for your own school, please contact:

## TOCfE's growing success:

- Since 1996,
- 24 countries on 5 continents
  - 250,000 + educators
  - 50,000 + classrooms
  - 8 + million children
  - And now in Australia

## TOC for Education – Growing Minds

*Creating a better world by teaching our children and those who support them how to think and communicate clearly using simple, logical and practical thinking tools.*
